IN-VOICE

Product Background

In-Voice is a state-of-the-art package of telecommunication products and services from QiComm.

In-Voice is based on a new concept within the telecommunications industry - the Virtual Local Operator (VLO) - a local company or an individual who provides a wide portfolio of telecommunications services to local customers without investing in the physical plant. These services have traditionally been provided by local telephone companies in your community. Now, by using QiComm's leading edge technology providing In-Voice with solid technical background, you can offer the same range of services to your customers.

QiComm is a private company established in 1989, with offices in the UK, Denmark, India and Sri Lanka and Points of Presence (POPs) in London, Paris, Frankfurt, New York, Sri Lanka, Canada, Madrid, Vienna, Milan and Zurich. The company is majority-owned by the Qi Group and forms the core of the company's telecommunications interests.

QiComm is a specialist Supplier, Distributor and Integrator of digital telecommunication equipment, access network systems and services, including voice network management services, billing and reporting tools, outsourced calling card/home account partitions, and account management services.

The company's operations are based in two facilities in London, the United Kingdom and comprise 42,000 square feet of space. From these facilities, the company provides outsourced switching services in the UK to many of the world's largest international telecommunications network operators.
